

METAL DETECTOR DML2000

réf.2464

To find cables or pipes before drilling or digging, or find objects buried in the ground, we recommend OUR METAL DETECTORS ultra-sensibles. Détektant all ferrous and non-ferrous, such as copper, silver, aluminium, leplomb, zinc, gold ... It provides advanced electronic technology: detector discernment indicating whether the object est composé iron, steel or other metal, and to avoid some unwanted objects; adjustable sensitivity for detection; Display lights, coupled with a warning sound, in assessing the signal intensity as a function of depth and the nature of the detected objects.

Our electronic sensors to detect coins, metal objects, gold, jewellery, money, NICKEL, aluminum, ZINC, copper, Platinum, zinc etc ...

The DML2000 model is a sophisticated metal detector. It has a jack for connecting a headset and a meter Needle for high accuracy. Detects a piece of 2 Euros to 5cm.. It has, moreover, a tight wire that allows it to explore in deep water - up to 91.4 cm

Specifications

Dimensions : 108 cm x 9.5 cm x 4.4 cm

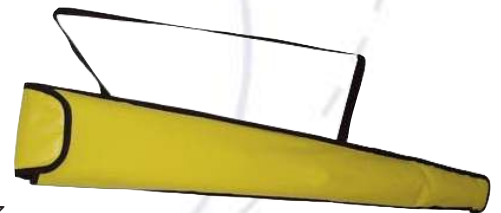

Weight : 0,8 Kg .

Alimentation : 4 piles AA Alkaline

Batterie indicator : Red LED

Température : -29°C to 50°C

Audio output : Frequency variable 20 to 3,500 Hertz
